DETAILED ACTION

1. Claims 1-20 are presented for examination.

2. It is noted that although the present application does contain line numbers in the specification and claims, the line numbers in the claims do not correspond to the preferred format. The preferred format is to number each line of every claim, with each claim beginning with line 1. For ease of reference by both the examiner and Applicant all future correspondence should include the recommended line numbering.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 3. Claims 1, 3-8, 10-11, 13-14, 18 and 20 are rejected under 35 U.S.C. 102(e) as being unpatentable over Ahrens et al. (U.S. Patent 6,968,302 B1).

Art Unit: 2195

4. As to claim 1, Ahrens teaches the invention substantially as claimed including: an apparatus for a control device for providing multimedia monitoring and control of a remote machine comprising:

a processor (computer 32, Fig. 2; col. 5, lines 3-6) for:

processing of control data and communication of said data from said remote machine (col. 5, lines 6-12; col.6, lines 11-13); and

processing of multimedia information regarding a monitored status of the remote machine (col. 5, lines 13-25; col. 8, lines 9-13); and

A multimedia connection coupled to said processors providing a multimedia transmission connection to the remote machine (the computer 32 connected to a video camera, col.4, lines 22-26), and transmitting said multimedia information regarding a monitored status of the remote machine (col. 4, lines 30-38; col. 8, lines 9-13).

- 5. As to claims 3 and 13, Ahrens teaches a visualization device that generates visualization information regarding the status of the remote machine (col. 4, lines 30-38; col. 8, lines 9-13).
- 6. As to claims 4 and 14, Ahrens teaches an augmented reality device that generates the multimedia information from one or more senses of a user in the vicinity of the remote machine (Fig. 2; col. 4, lines 30-38; col. 8, lines 9-13).

Art Unit: 2195

7. As to claim 5, Ahrens teaches the multimedia connection is bi-directional (col. 3, lines 56-62; col. 8, lines 15-18).

Page 4

- 8. As to claim 6, Ahrens teaches trace functionality transferred over the telecommunication link for real-time transmission of multimedia data connection (col. 8, lines 9-13).
- 9. As to claim 7, Ahrens teaches a data-processing device coupled remotely with said machine for controlling the processing of the multimedia information (Fig. 2; col. 1, line 63 col. 2, line 10).
- 10. As to claims 8 and 18, Ahrens teaches data-processing device encompasses multiple data-processing units which have communication connections to one another and which each have a telecommunication connection for real-time transfer of multimedia information to the control device (Fig. 2; col. 4, line 13-38).
- 11. As to claims 10 and 20, Ahrens teaches the communication between the respective components is carried out over the internet (col. 4, lines 18-26).
- 12. As to claim 11, it is rejected for the same reason as claim 1. In addition, Ahrens teaches processing information generated by the monitored remote machine (col. 5, lines 6-12; col.6, lines 11-13);

Art Unit: 2195

Generating multimedia information regarding a monitored status of the remote machine (col. 4, lines 27-38; col. 5, lines 13-25; col. 8, lines 9-13).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 13. Claims 2, 9,12, 15-17 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ahrens et al. (U.S. Patent 6,968,302 B1) in view of Widegren et al. (U.S. 6,374,112 B1).
- 14. As to claims 2, 9,12,15-16 and 19, Aiken does not explicitly teach the processor enables a UMTS connection. However, Widegren teaches the processor enables a UMTS connection (col.5, lines 29-31).
- 15. It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the teachings of the Ahrens and Widegren because Widegren's UMTS connection would increase the flexibility of Ahrens' system by

Application/Control Number: 09/938,447 Page 6

Art Unit: 2195

providing a wide variety of mobile communications services and resources to support those services.

16. As to claim 17, Ahrens teaches remotely processing the multimedia information (col. 5, lines 13-25; col. 8, lines 9-13).

Conclusion

17. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Camquy Truong whose telephone number is (571) 272-3773. The examiner can normally be reached on 8AM – 5PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Meng-Ai An can be reached on 571-272-3756. The fax phone number for the organization where this application or proceeding is assigned is 571-273-3756.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR of Public PAIP. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIP system, contact the Electronic Business Center (EBC) at 866-217-9197(toll-free).
